GUK SELF-LOCKING NUTS

Allow the fastening of components onto threaded shafts.

Nut locking is achieved with a polyamide insert (-40°C to +100°C), providing robust fastening.

ADVANTAGES OF GUK SELF-LOCKING NUTS

- **COST REDUCTION:** no need for a keyway slot in the shaft for locking.
- **VIBRATION RESISTANCE:** effective in vibration-prone environments.
- **INCREASED SAFETY:** extra resistance against loosening, ensuring secure fastening.
- **THREAD PROTECTION:** polyamide self-locking mechanism prevents damage to threads.
- **EASE OF USE:** mounting without the need for special tools.
- **VERSATILITY:** multiple applications in mechanical, agricultural, construction, and other industries.

RECOMMENDATION: reusing self-locking nuts may reduce locking efficiency, bringing the loosening torque closer to the safety torque. Depending on application criticality, 1 to 3 reuses are recommended.
